# PCBM Barrier Reflectors

Davidson PCBM's are available in ten styles:

## BIG DOG PCBM

The Big Dog PCBM utilizes 96 square inches of fluorescent orange prismatic sheeting to provide more brightness than any other barrier mount reflector. This extra large top mount reflector was designed for work zones where additional brightness is critical for guiding traffic.

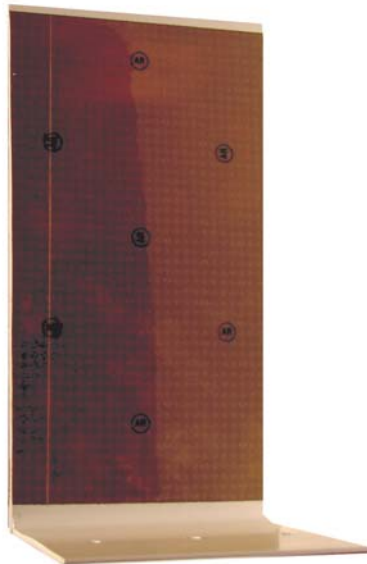

Big Dog PCBM

## LITTLE DOG PCBM

The Little Dog PCBM provides incredible brightness with 72 square inches of reflective sheeting. This top mount barrier reflector takes the bite out of hazardous traffic conditions.

## PCBM-36

36 square inches of reflective sheeting make this extra wide top mount marker incredibly bright. Additional brightness is often critical to contend with headlights of oncoming traffic.

PCBM 36

## PCBM-L16

The PCBM-L16 is designed to create delineation that is 48 above the roadway, as required by many states. Our PCBM-L16 is easily mounted on the top of a standard 32 inch barrier wall. The 3x12 reflector provides the same amount of visibility as that of our Flexi-Guide 400 & 500 roadside delineator posts.

# Options and Applications for PCBM Barrier Markers

## High Impact Barrier Mount Delineators

### PCBM-12

The PCBM-12 is our most popular model for work zone traffic control or permanent delineation. It has over 12 square inches of reflective sheeting and exceeds federal standards for brightness. The PCBM-12 can be used for top or side mount placement.

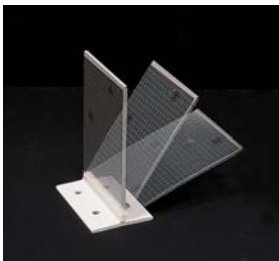

The added brightness of the PCBM-12 gives the motorist extra response time when driving through hazardous work zones day or night.

PCBM 12

### PCBM-T12

This is our most popular barrier mount reflector which features a built in poly-urethane hinge. This hinge provides tremendous flexibility and impact resistance. The flexibility of the T12 allows the reflector to fold down and spring back to an upright position.

### PCBM-9

Our most economical model of barrier mount reflectors is the PCBM-9. The PCBM-9 meets minimum MUTCD requirements for reflectivity with 9 square inches of reflective sheeting. The PCBM-9 can be used for top or side mount placement.

PCBM-9 CM

### PCBM-9 CM

The PCBM-9 CM (Center Mount) barrier reflector features a double bracket which houses a 3 1/4 reflective lens. The smooth material of the lens prevents dirt from adhering to the surface keeping the reflector brighter longer.

PCBM -T8

### PCBM-T8

The PCBM-T8 was created to be

used with moveable barrier systems. Eight inches of reflective sheeting is applied across one or both sides of the PCBM-T8 to provide the motorist with guidance and direction where moveable barriers are in place.

### PCBM-15

Designed for top mount installations in regions that receive heavy snow fall because the 8inch height places the reflector above the snow on barrier.

### Adhesive 795A

A one-part, fast cure adhesive for bonding PCBM reflectors that requires no mixing and is effective over a broad range of temperatures. 795A has excellent weathering properties and offers a primer-less adhesion to concrete, steel and asphalt.

### Davidson PCBM s Effective and Convenient

High-Impact Engineering Thermoplastics resist shattering even in the coldest temperatures Utilizes the latest technology in reflective sheeting for outstanding visibility and brightness

Easy installation and low maintenance keeps workers out of the road and safe

Superior impact resistance reduces losses and the need for maintenance

Davidson s PCBM's outshine the competition!
